

bs4

bs4 + css3 + js => goes minimal

We set up a local environment similar to the Codepen Online for fast prototyping

1. Going minimal with a CDN => Outsourcing the location of files instead of having them locally
2. No Task Runner => We work only CSS (no SASS and others)
3. No Automatic Hot Reload =>
4. Manual Hot Reload => SHIFT + CMD + R on Mac 😊

Easy and fast so we can focus on HTML + CSS + Javascript instead of putting a wall of tooling between us.
